

FRONT DESK • OPS PROTOCOL

Consent, Check-In & Client Records

How Square booking, Hello Gorgeous admin, the tablet kiosk, and signed consents fit together – and exactly what front desk does.

Print & keep at front desk. · Hello Gorgeous Med Spa · Updated July 15, 2026

1. The simple mental model

System	What it owns	Front desk truth
Square	Online booking calendar, payments, packages	"Do they have an appointment / paid?"
Hello Gorgeous Admin	Client chart, consent packets, signed PDFs/records, clinical ops	"Are consents signed? What's on file?"
Kiosk / tablet	In-spa signing screen only – not a second database	Same consents, just signed on the iPad
Email / SMS / link	Remote signing of the same packet	Same record as tablet – just signed offsite

One vault: Signed consents always live on the **Hello Gorgeous client record** (/admin/clients → open client → Consents). Tablet, email, SMS, and portal all write to that same place. Square does *not* replace this vault.

2. How it syncs (what actually happens)

1. **Booking** – Client books online (Square /book) or staff books in admin.
2. **Client match** – System looks up / creates the HG client by email/phone.
3. **Consent packet** – Outstanding forms for that visit/service become a packet tied to the client (and appointment when linked).
4. **Sign** – Client signs via:
 - Email / SMS / magic link (at home), or
 - Portal /portal/consents, or
 - Kiosk tablet /kiosk or Calendar → kiosk consent link
5. **Saved** – Signature + timestamp attach to the client. Staff see it on the client chart and appointment consent status.

6. **Treat** – Provider should not start until required consents show signed (admin may flag unsigned).

Important right now: If an appointment exists *only* in Square and has not been bridged into Hello Gorgeous, the phone kiosk may say it can't find them. Fix: open/create the client in HG admin, send consents from /admin/owner/consents or the appointment, or use a generated kiosk link from Calendar when available. Booking money lives in Square; **legal signatures live in HG.**

3. Front desk protocol – morning

1. Open calendar: [hellogorgeousmedspa.com/admin/calendar](https://www.hellogorgeousmedspa.com/admin/calendar)
2. Scan today's list. Flag:
 - **New clients** (first visit)
 - **New service types** (may need extra consents: injectables, laser, weight loss, etc.)
 - Anyone with **unsigned / expired** consents
3. Optional: send consent links **before** they arrive (email/SMS from Consents or appointment) so they sign at home.
4. Wake the front-desk tablet → bookmark <https://www.hellogorgeousmedspa.com/kiosk> (Safari, full screen / Guided Access if you use it).

4. When the client walks in

A Preferred – tablet kiosk (in person)

1. Unlock the tablet → open **Kiosk**.
2. Client enters **phone number** used at booking → Check in.
3. If consents are outstanding, continue to signing screen (or open the kiosk URL shown).
4. **Hand them the tablet.** They read each form and sign with finger/stylus.
5. When finished, take tablet back. Confirm success message / return to kiosk home.
6. In admin, open their client → **Consents** tab → confirm forms show **Signed** with today's date.
7. Mark appointment checked in / notify provider they are ready.

B If they already signed at home

1. Open client chart → Consents.
2. Confirm required forms are Signed and not expired.
3. Check them in. No tablet needed.

C If kiosk can't find them

1. Search client in /admin/clients by phone/email/name.
2. If missing → **Create client** with correct phone + email.
3. Go to /admin/owner/consents (or appointment detail):
 - Select the forms needed (at minimum: General + HIPAA; add service-specific)
 - Send via **SMS** to their phone or **Copy link** and open that link *on the tablet*
4. They sign → refresh client Consents tab → verify Signed.

D Remote / no-show prevention (send ahead)

1. /admin/owner/consents → choose form(s) → Email or SMS.
2. Or from appointment: send consent / resend outstanding packet.
3. Tell client: "Please complete the secure link before you arrive."

5. What "keep it safe" means for front desk

- **Do** use HG consent links / kiosk only – never photo paper consents into random texts as the "official" file.
- **Do** verify Signed on the client chart before rooming for treatment.
- **Do** keep the tablet on the HG kiosk / consent URL only during check-in (no personal browsing with client PHI on screen).
- **Don't** email full medical histories to your personal inbox.
- **Don't** assume Square "Contracts" = your medical consent vault (optional booking forms ≠ HG signed consents).
- **Lock the tablet** when not in use (passcode / Guided Access).

6. Quick decision tree

Situation	Do this
New client, on-site, phone works on kiosk	Kiosk → hand tablet → verify Consents tab
Returning client, consents current	Check Consents → check in → room
Consents expired / new service	Send packet or kiosk link → sign → verify
Kiosk "can't find" phone	Find/create client in admin → send link → open on tablet
Client at home before visit	Email/SMS from Consents → they sign → you verify next day
Provider asks "are they cleared?"	Client chart → Consents → show Signed dates

7. Cheat-sheet URLs (bookmark these)

Task	URL
Front desk tablet (kiosk)	https://www.hello gorgeousmedspa.com/kiosk
Calendar / day view	/admin/calendar
Client search / charts	/admin/clients
Send / preview consent forms	/admin/owner/consents
Consent templates overview	/admin/consents
Online booking (send clients here)	/book

8. RX / RE GEN note (don't mix with injectables check-in)

Weight-loss / peptide / RE GEN intakes (/glp1-intake, /peptide-request, /rx/checkout/intake) are a **separate clinical track** from same-day injectable consents. Front desk: if they're here for aesthetics, use consents above. If they paid for RE GEN online, make sure post-payment intake is done before staff promises ship dates – ask admin/RX desk if unsure.

9. End-of-day (30 seconds)

- Any clients who were treated with unsigned required consents? Fix today (send + get signed), document with owner if treatment already happened.
- Plug tablet in; leave kiosk bookmark ready for tomorrow.
- Log any "kiosk couldn't find phone" cases so ops can fix Square ↔ HG appointment sync gaps.

One sentence to remember: Square books the visit · Hello Gorgeous holds the signed legal forms · The tablet is just how they sign in the lobby.
