

REGEN RX operating system — A to Z

How Danielle and Ryan run online orders: the website, Charm invoices, Bluefin cards, and Formulation / FormuConnect. Print this. Teach from this. Do not invent a third payment system.

Ryan writes the Rx. Danielle or Ryan send it to Formulation. Patients never order from a pharmacy. Stripe is off.

00 · THE HONEST MONEY ANSWER

Is the invoice integrated?

No. Our website does not automatically send a Charm invoice or charge a card when Ryan approves.

After Ryan says yes, a person signs into Charm, types a real dollar Charge, and taps **Send Invoice → Send Payment Link**. Charm emails and/or texts the patient a Bluefin pay page. They do not type a card on tryregenrx.com.

What is integrated

- **Square \$49 phone telehealth** — they book and pay Square. Confirmation comes from Square.
- **FormuConnect “Send to Formulation”** — after Ryan approves and the ticket has a SKU, one tap charges the *clinic* Formulation account (wholesale) and forwards the Rx. That is not the patient invoice.
- **In-chair Square Terminal** — tap / dip / swipe still allowed if they are at 74 W. Washington.

What is blocked on purpose: Square pay links, texts, and card-on-file for prescription products. Square's terms do not allow remote RX cards. The old “RX invoices” button on our admin that built a Square link is disabled. Do not work around it.

01 · WHO CLICKS WHAT

Person	Does	Does not
Ryan Kent, FNP-BC FPA	Chart review. Approve or decline. Telehealth. Pick SKU when there is no default. Send to Formulation after pay posts if Danielle is out.	Promise a result. Let a patient "order their own vial."
Danielle	Queue, Charm invoice + Bluefin link, GORGEOUS20 / \$49 credit, Send to Formulation, tracking, patient message.	Write or approve a prescription.
Desk	Book Square \$49. Point to /start. Never invent tracking.	Send Square RX links. Name Formulation or BoomRx to a client.
Patient	Intake, visit, pay the clinic invoice, wait for tracking.	Log into a pharmacy portal.

02 · TWO DOORS (PICK ONE)

Door A — Talk first (preferred)

1. They book tryregenrx.com/consult — Ryan Kent phone visit, \$49, 15 minutes. Square takes the card.
2. They get Square's confirmation (email/SMS) with the appointment time. Ryan calls them.
3. If he does not prescribe: they paid for the visit. No therapy refund.
4. If he does prescribe: send them tryregenrx.com/start if intake is not done. On the Charm therapy invoice, credit \$49 and paste the Square receipt id in the chart.

Door B — Request first

1. They complete tryregenrx.com/start (~8 min). Illinois, 21+. GORGEOUS20 = 20% off first medication order, shipping excluded, Ryan still decides.
2. They do **not** pay for medication on the website.
3. Ryan reviews at tryregenrx.com/ops → Today → Needs action → Chart.
4. If yes: Danielle sends the Charm invoice (see 04). If no: stop. No invoice.

Out of state: stop. We do not work around Illinois.

03 · WHAT THE CLIENT ACTUALLY GETS

Moment	What they receive
Book \$49 consult	Square confirmation email/SMS. Appointment time. Ryan calls. No Charm invoice yet.
Submit /start	They are in the queue. Staff email from provider@hellogorgeousmedspa.com if needed. No card charge for the vial.
Ryan needs labs or video	Status stays in Needs action. Staff tells them what is missing. Approve stays off until Ryan decides.
Ryan approves	Internal order is created. They do not automatically get a pay email from our site. Danielle must send the Charm invoice.
Charm invoice sent	Email and/or SMS from Charm with a Bluefin payment link. They tap Pay, enter the card on Bluefin's page (or pay in the Charm patient portal Pay button). Receipt lives in Charm.
Card posts	Charm receipt. We do not have an in-app "paid" toast on tryregenrx.com. Check Charm Billing. Then send the Rx.
Rx sent to pharmacy	They may see "pharmacy fulfillment" on their status page if that order exists. They never see FormuConnect.
Shipped	Staff puts tracking on the order and sends one message: "Your medication left the pharmacy. Tracking is in your account." SMS if we have a paid Square-era order wired for it.

Tell them: compounded medication is not FDA-approved. A consult is not a guaranteed prescription. We are cash-pay. We do not bill insurance. Shipping is on the invoice (\$25 most vials / \$35 stacks unless you wrote something else).

04 · HOW TO SEND THE INVOICE (CHARM + BLUEFIN)

Sign in: <https://accounts.charmtracker.com/signin>

1. Open the patient → **Billing** → **+ Invoice**.
2. **Clear Insurance / Payer**. Self-pay. If insurance is on the invoice, Patient Responsibility stays \$0 and Bluefin will not charge.
3. Add the product/visit row. Click **Charge** and type real dollars (example 299.00). Quantity at least 1. Tab out.
4. Bottom must show **Total / Balance Due** in dollars — not \$0. If it is \$0, Bluefin has nothing to take.
5. Apply GORGEOUS20 (20% product only) or the \$49 consult credit here. There is no website coupon for this.
6. **Send Invoice** → **Send Payment Link** (email and/or SMS). Pick the Hello Gorgeous / REGEN Bluefin beneficiary.
7. Wait until Charm shows the payment. Paste the Charm receipt id in the chart.

In the chair: Charm → Add Payment → Card → Use Payment Gateway → Key-In or reader. Or Square Terminal for RX only if they are physically in Oswego.

Stuck \$0: see the staff pay kit at </staff/protocols/guides/Charm-Bluefin-Take-a-Payment.html>.

05 · RYAN'S CLINICAL QUEUE

1. Open tryregenrx.com/ops (or [/regen/ops](https://regen.com/ops)). Today → **Needs action**.
2. Teal **Review** opens the chart. Chart URL: </ops/patients/chart?email=> — do not put a dotted email in the path.
3. Thin history = labs or video. Do not guess.
4. Four boxes must be true before green **Approve**: history reviewed, contraindications considered, telehealth appropriate, "I am Ryan Kent and this is my decision."
5. Write a note a lawyer could read in two years.
6. **needs_video** and **needs_labs** stay in Needs action until Approve or Decline. That is not a bug.
7. Only Ryan (or a covering Illinois-licensed prescriber Danielle named in writing) clicks Approve.

If the program has no safe default SKU (HRT, men's performance), Ryan picks the Formulation SKU on the ticket before anyone sends it.

06 · SEND THE RX (FORMULATION / FORMUCONNECT)

Default pharmacy is Formulation Rx. The API is on. Chelsea's key works. Ryan's NPI **1265021919** goes on the payload. **Send to Formulation charges the clinic account** (card on file / net terms) and forwards the Rx to PioneerRx. It does not charge the patient.

1. Confirm Charm (or Terminal) payment has posted.
2. Confirm intake has name, DOB, Female or Male, street, city, ZIP, phone. Missing any of those stops the send.
3. Open hellogorgeousmedspa.com/admin/rx/regen-orders → that order.
4. Ryan has approved. Ticket says **SKU ready**.
5. Tap pink **Send to Formulation — charges Formulation**.
6. Pharmacy id writes back on the order. Do not tap it twice. A second tap will not re-charge if the receipt is already saved.

Backup: Copy FormuConnect ticket → paste in portal.formuconnect.com → then Mark FormuConnect order placed (manual).

BoomRx only

BPC/TB and blends Formulation does not carry. Paste in the BoomRx portal. FormuConnect cannot take those SKUs. Patients still hear "licensed compounding pharmacy." Never say BoomRx, Wolverine, KLOW, or ASCEND to a client.

Charm eRx (if Ryan writes inside Charm) is a separate door into the pharmacy. Do not double-send the same fill through FormuConnect unless you meant to.

07 · AFTER IT SHIPS

1. When Formulation has tracking, put it on the order (carrier + number).
2. One patient message: "Your medication left the pharmacy. Tracking is in your account."
3. Refills are another clinical review — not an automatic monthly charge.

08 · DECLINE AND REFUNDS

- Ryan declines before a Charm charge: do not invoice.
- They already paid Charm and he declines before the Rx is placed: refund that medication charge the same business day in Charm (Billing → that payment → refund). Paste the Charm receipt id in the chart.
- There is no refund button in /ops/payments. Do not open Stripe.
- After compounded / shipped: no vial refund. A licensed Illinois clinician reviews whether they continue.
- \$49 Square visit: if he does not prescribe, the visit fee stays.

09 · LOGINS (STAFF ONLY)

System	URL	What it is
Ops queue	tryregenrx.com/ops	Ryan's Today / Chart / Approve
Fulfillment + Formulation send	hellogorgeousmedspa.com/admin/rx/regen-orders	Ticket, Send to Formulation, tracking
Charm	accounts.charmtracker.com/signin	Chart + invoice + Bluefin
FormuConnect	portal.formuconnect.com/login	Backup paste if send is down
Square	Spa booking / \$49 consult	Not RX pay links
Patient site	tryregenrx.com	/consult · /start · /login

10 · FIRST WEEK DRILL (RYAN + DANIELLE TOGETHER)

1. Ryan: open Today, open one Chart, do not Approve a dummy patient.
2. Danielle: in Charm, build a \$1 test invoice on a staff/test chart, send the pay link to yourself, pay it, confirm Bluefin posts. Then refund the \$1 in Charm.
3. On a real approved + paid order: Send to Formulation once. Confirm the pharmacy id on the order.
4. Watch email/SMS as the patient would: Square consult vs Charm pay link. They look different. That is correct.

11 · WORDS

Patients hear: licensed Illinois clinician, licensed compounding pharmacy, cash-pay, compounded is not FDA-approved.

Patients never hear: Formulation, FormuConnect, BoomRx, PioneerRx, Stripe, "the API."

Danielle is owner. She is not the prescriber. Medical Director is Dr. Mukesh Arora, MD. Prescriber is Ryan D Kent, FNP-BC FPA, NPI 1265021919, IL FPA APRN 277.003448.
